@Transaction annotation

1)

```
    // save
    @Transactional  1 usage
    public void saveEntry(JournalEntry entry, String username) {
        Users user = usersServices.getByUserName(username);
        entry.setDate(LocalDateTime.now());
        JournalEntry entries = journalRepository.save(entry);
        user.getJournalEntries().add(entries);
//          user.setUsername(null);
        usersServices.addUser(user);
    }
```

2) Create a @Bean in a main application file

```
@Bean
public PlatformTransactionManager transactionManager(MongoDatabaseFactory dbFactory) {
    return new MongoTransactionManager(dbFactory);
}
```
